Abstract

Local wisdom serves as a foundation for decision-making at the local level, particularly in natural resource management and various other social activities. The values, traditions, customs, and knowledge contained in local wisdom form the foundation for the formation of a unique cultural identity and distinguish one community from another. This study aims to analyze how community empowerment through a local wisdom approach can strengthen cultural identity while encouraging local economic empowerment in the Tanoker Learning Village, Jember. Using a descriptive qualitative approach, data were obtained through observation, in-depth interviews, and documentation. The results show that local wisdom formulated in cultural education activities, traditional art performances, and community-based creative economy has made a significant contribution to increasing community participation, strengthening a sense of ownership of local culture, and opening new economic opportunities based on local potential. This study recommends the integration of local values into community empowerment and education programs as a sustainable development strategy.

Keywords: Community Empowerment, Local Wisdom, Cultural Identity, Local Economy, Tanoker Jember

1. Introduction

Globalization brings rapid social and cultural changes, which often erode local cultural identities. Globalization encourages the formation of multicultural identities, where individuals integrate local and global identities. However, this can lead to identity conflicts and challenges in maintaining a balance between the two (Choi, 2022). Rapid social and economic changes cause communities to abandon local cultures that have been passed down through generations. This has resulted in a weakening of cultural identity and a decline in the competitiveness of local economies based on traditional wisdom (Brooks et al., 2023). One effort to maintain and strengthen cultural identity and improve community economic well-being is through empowerment based on local wisdom (Pratomo et al., 2024). In this context, community empowerment based on local wisdom is crucial for maintaining cultural existence and strengthening community-based economies. Community empowerment is not only the responsibility of the government but also of all elements of society, including universities. Community participation is considered a crucial element for achieving inclusive and sustainable development (Sandika et al., 2024). Community empowerment efforts have become increasingly urgent as demands for environmental conservation, human resource development, and the demands inherent in the dynamics of development grow. Community empowerment can foster community independence and enable them to compete in the era of globalization. Community empowerment is a process by which individuals and groups gain the knowledge, skills, resources, and confidence to take control of their own lives and contribute to sustainable development. Local wisdom encompasses not only traditional values but also social,

economic, and cultural practices passed down through generations and proven relevant to addressing the challenges of the times. Local wisdom encompasses various aspects, from sustainable agricultural practices to inclusive social systems and customs rich in symbolic meaning (Nurhaliza & Purnomo, 2021). The interconnectedness of local wisdom, cultural identity, and the local economy creates a mutually supportive and reinforcing ecosystem.

Local wisdom is the knowledge, values, and practices that develop and are passed down from generation to generation within a community or society. Local wisdom is an integral part of community life. It serves as a guide for life that regulates human interactions with nature and each other, and serves as a foundation for decision-making and problem-solving. Local wisdom serves as the foundation for decision-making at the local level, particularly in natural resource management and various other social activities (Fatmi & Fauzan, 2022). In-depth knowledge and understanding of the natural environment, as well as sustainable agricultural practices, enable communities to manage natural resources responsibly and sustainably (Lanur & Mar9ni, 2015). Local wisdom also serves as a source of inspiration for the development of creative and innovative products with economic value. Forms of local wisdom provide opportunities for creativity for communities, which subsequently give rise to creative industries (MuhOiatun, 2018). The integration of local wisdom into the educational curriculum also plays a crucial role in shaping the character of the younger generation and instilling noble cultural values (Annisha, 2024). The development of science can be inspired by local wisdom, which often contains time-tested knowledge. Developing unique and high-quality local products can increase the competitiveness of the local economy and create new jobs for the community. Local wisdom is an integral part of a community's identity. By understanding its knowledge system, we can appreciate the uniqueness and richness of its culture. Therefore, preserving and developing local wisdom is crucial for maintaining cultural sustainability and improving community welfare (Annisha, 2024). Local wisdom plays a central role in community empowerment, particularly in the context of strengthening cultural identity and improving the local economy.

Cultural identity is the feeling or awareness of belonging to a particular cultural group. Cultural identity is the distinctive characteristics, beliefs, and values held by a community that distinguish it from other groups. This cultural identity can manifest itself in various forms, such as language, customs, art, music, clothing, and food. In the era of globalization, cultural identity has become increasingly important as a differentiator and social glue. Cultural identity symbolizes a nation's identity, distinguishing it from other nations. Language, as a determining factor in cultural identity, plays a positive and communicative role in building the foundation of the cultural landscape through the continuous representation and transmission of diverse cultural characteristics (Nugroho & Kusuma, 2023). A strong cultural identity can strengthen a sense of unity and togetherness, and increase pride in the nation and state (Se9awan & Ramdhani, 2021). Maintaining cultural identity is crucial in the era of globalization to prevent the loss of national identity.

A local economy refers to economic activities centered on a speciOic geographic area, such as a village, city, or district. A local economy involves the production, distribution, and consumption of goods and services within that area. The local economy plays a crucial role in creating jobs, increasing community income, and reducing poverty in an area. Local economic development can be achieved by utilizing the potential of natural resources and human resources within the region. The local economy is the main driver of regional development and increases the region's competitiveness in facing global competition. Strengthening the local economy can be achieved by increasing the competitiveness of local products, expanding market access, and improving the quality of human resources. Local economic development can be achieved by utilizing local wisdom as social and cultural capital. The concept of a circular economy can be implemented through a partnership model, where the government acts as a facilitator and regulator, private companies as business drivers, and the community as suppliers of raw materials or small business actors interact, collaborate, and participate in economic development programs (Pasaribu, 2006)

This approach focuses on utilizing local resources, both in social, economic, and cultural aspects, as a foundation for sustainable development (Yanan et al., 2024) the context of cultural identity, local wisdom-based empowerment helps communities maintain their ancestral heritage, such as traditional arts, regional languages, customs, and folk games (Meng et al., 2024; Wijaya Kusuma, 2023). Meanwhile, in the economic aspect, local wisdom-based empowerment can encourage community economic growth through the development of culture-based businesses, such as handicrafts, traditional culinary arts, and community-based tourism (Hasan et al., 2022) Thus, communities are not only able to maintain their culture but also gain economic beneOits from its preservation. With synergy between the government, academics, business actors, and the community, local wisdom-based empowerment can be an effective strategy in creating sustainable

development, where cultural identity is maintained and local economic welfare is increased (Azwar et al., 2023; Nalikan et al., 2025)

Tanoker Learning Village, located in Ledokombo District, Jember Regency, is an example of a community that utilizes local wisdom to develop a culture-based empowerment model. Tanoker Learning Village is known as a community active in empowering the community through various local culture-based activities, particularly in efforts to preserve traditional games, arts, and the creative economy (Juariyah & Adawiyah, 2022). The programs implemented in Tanoker not only aim to reintroduce local culture to the younger generation but also serve as a strategy to improve the community's economic welfare through the tourism sector and culture-based creative industries (Juariyah & Adawiyah, 2022). This initiative emphasizes alternative education, preservation of traditions, and development of the creative economy by empowering children, youth, and the community in an inclusive manner. Therefore, this research is important to examine the extent to which local wisdom is used as an empowerment strategy that impacts the strengthening of local cultural identity and the local economy. Tanoker Learning Village, with all its uniqueness and potential, offers an interesting case study of how communities can utilize local wisdom to achieve sustainable development. Therefore, an in-depth analysis of the role of local wisdom in community empowerment in Tanoker Learning Village is very relevant to understanding the socio-economic dynamics that occur and providing inspiration for other communities that are trying to develop their local potential.

2. Methods

The research method used in this scientific article is a qualitative method with a case study approach, chosen to explore in depth the dynamics and complexities of community empowerment through local wisdom in the Tanoker Learning Village in Jember. This approach allows researchers to holistically understand the meanings, values, and practices that develop within the community within its unique social, cultural, and economic context. Through qualitative methods, researchers can capture the various perspectives and subjective experiences of empowerment actors directly, as well as document the social transformation processes occurring within the community (Sari et al., 2022).

Data collection was conducted through several techniques, including in-depth interviews involving key informants such as Tanoker managers, local community leaders, program facilitators, and participants actively involved in empowerment activities. These interviews were semi-structured to provide space for informants to freely express their views, experiences, and aspirations, while remaining focused on the research focus. Furthermore, participant observation was conducted, where researchers were directly involved in community activities to observe the empowerment process, social interactions, and the implementation of local wisdom values in daily life. This technique provided researchers with the advantage of capturing social nuances that cannot always be revealed through interviews alone.

Data obtained from interviews and observations were then supported by documentation such as activity archives, Tanoker publications, documentary photographs, and various other visual materials that recorded the traces of empowerment activities. All collected data were analyzed thematically through stages of coding, categorization, and drawing conclusions that represent patterns of meaning and empowerment strategies based on local wisdom. With this approach, the research aims not only to describe existing realities but also to uncover the contribution of local wisdom as a foundation for strengthening local cultural and economic identity amidst the challenges of modernization.

3. Results and Discussion

The Role of Local Wisdom in Education and Strengthening Cultural Identity in the Tanoker Learning Village in Jember

The research findings show that local wisdom plays a central role in the informal education process and the formation of cultural identity among children and adolescents in the Tanoker Learning Village in Jember. In this context, local wisdom is positioned not only as a preserved cultural heritage but also as a pedagogical medium strategically utilized in the community empowerment process. Tanoker actively integrates elements of local Madurese and Javanese culture into various informal educational activities. These elements include traditional games (such as stilts, gobak sodor, and Bentengan), regional dances (remo, topeng, and Madurese dances), as well as the use of regional

languages, local symbols, and folklore narratives in learning activities. This utilization is contextual and carried out consistently, so that local culture is not merely an object of study but an integral part of the learning method itself.

One concrete example of this implementation is the Dolanan Festival, an annual event designed as both an educational and recreational space, where children are given the opportunity to perform, play, and showcase their skills in traditional games and local performing arts. This festival not only serves as a medium for the transfer of cultural values, but also strengthens social networks between communities and reintroduces local culture to the wider community, including the younger generation, who are increasingly exposed to global culture.

Furthermore, the Ngaji Budaya activity serves as an important means of reflecting on local values, spirituality, and community history. In this session, children and adolescents are invited to openly discuss the meaning of symbols, life philosophies, and local ethics embedded in the community's traditions and cultural practices. This activity also involves local traditional leaders and cultural figures as resource persons, strengthening cultural authority and providing an authentic dimension to the learning process. Local arts and crafts training activities are also an important vehicle for fostering creativity and a love of one's own culture. These training include making traditional masks, Madurese batik, traditional musical instruments, and vocal arts such as macapat. Children are taught not only technical skills but also an understanding of the symbolic and historical values inherent in each art form.

The impact of this approach is evident in the increased sense of pride, belonging, and awareness of cultural identity among children and adolescents. Based on in-depth interviews and participant observation, participants were found to feel more confident when speaking about their culture, show a greater interest in local history, and demonstrate a tendency to voluntarily preserve traditions, both within their families and communities. Instilling cultural identity through local wisdom also strengthens social values, such as mutual cooperation, respect for differences, and concern for the social environment. These values are formed through collective experiences in culture-based activities, which are then reflected in children's daily behavior at school and at home.

Overall, the results of this study indicate that local wisdom in Tanoker is not only a source of cultural education, but also an effective strategy for character building, revitalizing local culture, and creating inclusive and contextual learning spaces. Therefore, the local wisdom-based empowerment model implemented by Tanoker can serve as a reference for developing culture-based education in other communities, particularly in facing the challenges of globalization and cultural homogenization.

Local Wisdom as Social and Economic Capital in Community Empowerment in the Tanoker Learning Village in Jember

Local wisdom serves not only as a source of cultural values but also as significant social and economic capital in the community empowerment strategy at the Tanoker Learning Village in Jember. Integrating local wisdom into economic activities is a key strategy used by Tanoker to leverage local potential and create community-based economic independence.

1. **Local Wisdom as Social Capital** Local wisdom in Tanoker is manifested through collective values such as mutual cooperation, deliberation, community solidarity, and a local work ethic that are deeply rooted in Madurese and Javanese culture. These values serve as social capital that strengthens community cohesion and builds trust among community members, which is crucial for carrying out collective economic activities. Tanoker's empowerment practices focus not only on creating economic value but also on building social networks based on local values, such as the formation of joint business groups (KUB), informal cooperatives, and community forums. In these forums, the community is involved in decision-making, role distribution, and profit sharing, all of which are carried out based on participatory and egalitarian principles.
2. **Tanoker's Local Potential-Based Micro-Business Training** provides various entrepreneurship and creative economic skills training programs based on local potential, such as traditional foods (e.g., tape, cassava chips, and coconut products), handicrafts (such as bamboo weaving, Madurese batik, and wooden masks), and agricultural and organic farming processing. This training emphasizes not only the technical aspects of production but also business management, digital marketing, and attractive product packaging, without losing the local nuance. Observations and interviews indicate that this training approach is revitalizing traditional skills that were previously being abandoned and making them a viable source of livelihood. Training is conducted periodically and involves local mentors and external facilitators who understand the socio-cultural characteristics of the local community.

3. **Women's Empowerment through the Creative Economy:** One significant achievement in the context of local wisdom-based economic empowerment is the formation of Joint Business Groups (KUB), the majority of whose members are women. These KUBs focus on the production of goods and services with high traditional values, such as regional market snacks, bags made from natural fibers, herbal soaps, and locally patterned textile crafts. Through KUB, women not only gain additional income but also experience social transformation in the form of increased self-confidence, strengthened positions in household decision-making, and expanded access to public and economic spaces. Furthermore, KUB serves as a platform for collective learning for women in financial management, community leadership, and social advocacy. In terms of sustainability, this local tradition-based cooperative (KUB) receives ecosystem support from Tanoker through marketing facilitation, local brand development, and integration into cultural festivals such as the Dolanan Festival and traditional markets. KUB products have also been marketed through digital channels and in collaboration with external parties, demonstrating the transformation from a subsistence economy to a culture-based creative economy.
4. **Economic and Social Impacts:** Interview data and documentation show that household incomes of KUB members increased by an average of 20-30% after one year of participating in the empowerment program. Furthermore, a sense of collective ownership of local products has been created, providing a source of pride and a new economic identity for the community. The added value of local products is also enhanced by the cultural narratives that accompany each product, creating unique market differentiation. Local wisdom articulated in economic practices has become a productive form of social capital—harmoniously linking cultural values, collective identity, and economic activities. This demonstrates that economic empowerment does not have to be at odds with cultural preservation, but rather can reinforce each other when managed with a participatory approach based on local wisdom.

The Impact of Local Wisdom-Based Empowerment on the Local Economy and Community Welfare

The research also shows that integrating local wisdom into community empowerment strategies has significant economic implications, both at the household and community levels. This approach not only strengthens local economic sustainability but also contributes to improving overall community well-being.

1. **Household Income Increase** Data obtained through interviews and documentation of community economic activities indicate that community participation in local wisdom-based economic activities has significantly increased household income. In the case of joint business groups (KUB) and microeconomic actors assisted by Tanoker, the average income increase ranged from 20% to 35% in the first year after actively participating in the empowerment program. This increase occurred as a result of the transformation of traditional skills into high-value economic products, through a creative economy approach. For example, traditional processed food products that were previously consumed only within households are now professionally packaged and sold through digital channels. This demonstrates that locally based products are able to meet market needs without losing their cultural characteristics.
2. **Strengthening Local Economic Structures** Community participation in a local wisdom-based economy contributes to strengthening local economic structures. Small and micro-enterprises based on local wisdom, such as handicrafts, organic farming, and traditional culinary arts, not only provide new sources of income but also expand the local supply chain. These activities create a mutually supportive economic ecosystem between producers, raw material suppliers, distributors, and local customers. Furthermore, the involvement of various social groups—including women, youth, and marginalized groups—in the production and distribution process broadens the economic base and strengthens community resilience. This contrasts with conventional economic approaches, which tend to be exclusive and profit-oriented. A locally-based approach allows for equitable distribution of economic benefits and a more equitable distribution of resources.
3. **Increasing Added Value and Product Competitiveness** One important finding is the increased added value of community products due to the application of creative economy principles in managing local wisdom. Products such as batik with distinctive local motifs, herbal soaps made from traditional plants, and regional specialties are given cultural narratives, local identities, and attractive packaging, thereby increasing their competitiveness in the market. This strategy allows Tanoker community products to compete not only in the local market but also penetrate the national digital market through e-commerce platforms and social media. The cultural narratives

inherent in the products create strong differentiation, attracting the interest of consumers who value authenticity and sustainability. For example, bamboo weaving crafts, previously considered old-fashioned, through a redesign and cultural storytelling approach, are now superior products marketed as symbols of eco-culture and sustainable living. This confirms that local wisdom is not merely a cultural ornament, but has real economic potential if cultivated with the right strategy.

4. **Social Welfare and Community Transformation:** Increased income and strengthening of the local economy directly impact the social welfare dimension of the community. Based on observations, there have been significant changes in aspects of consumption, children's education, health, and social participation. Many families previously classified as economically vulnerable are now able to meet basic needs more adequately. Furthermore, empowerment based on local wisdom also triggers social transformation of the community, such as increased participation of women in public spaces, the growth of local leadership, and the formation of solidarity networks among residents. Cultural values revived through economic activities provide a strong foundation for creating a more cohesive and resilient community to external challenges, including the economic crisis and the pressures of globalization.
5. **Long-Term Implications for Sustainable Development** More broadly, this approach supports sustainable development at the local level. By relying on local potential and values, this empowerment model encourages communities to become subjects of development, not mere objects. In addition to creating economic sustainability, this approach also strengthens cultural identity, improves quality of life, and builds inclusive social structures.

The Tanoker model demonstrates that empowerment based on local wisdom can create a values-based economy, not just profit-driven. This makes a significant contribution to building a more humane and sustainable alternative economic system that is relevant to the local socio-cultural contexts across Indonesia.

Challenges and Sustainability Strategies for Local Wisdom-Based Empowerment Programs in the Tanoker Learning Village in Jember

In the implementation of a local wisdom-based community empowerment program in the Tanoker Learning Village in Jember, sustainability was found to be a crucial strategic issue. Although the program has demonstrated success in terms of cultural education and strengthening the local economy, several structural and cultural challenges hinder its long-term sustainability. This study identifies three key challenges and formulates concrete strategies developed by the Tanoker community to address them.

1. **Limited Market Access for Local Products** One of the most significant challenges is limited market access, especially for products from micro-enterprises based on local wisdom. Tanoker community products, despite their unique culture and local added value, often struggle to penetrate broader markets due to constraints such as limited distribution networks, lack of digital literacy, and low large-scale production capacity. In some cases, reliance on local events such as the Dolanan Festival as the sole sales channel leads to unstable income fluctuations. Furthermore, competition with mass-market commercial products in the digital market tends to marginalize local products, especially if they are not supported by adequate marketing strategies. The strategy developed to address this challenge is the digitalization of community culture and product promotion. Tanoker has begun building a digital presence through social media, online catalogs, and collaborations with local e-commerce platforms. The use of cultural narratives in product promotion is a distinctive approach that not only showcases goods but also conveys the stories, symbolic meanings, and local philosophies contained within each product.
2. **The Cultural Regeneration Crisis Among Youth** A second, quite serious challenge is the weakening of cultural regeneration among the younger generation. Exposure to global culture through digital media, lifestyle changes, and a formal education system that does not accommodate local culture has resulted in children and adolescents being less familiar with—and even tending to distance themselves from—their own cultural identity. This phenomenon indicates an intergenerational disjunction in the transmission of local wisdom, where values, traditional practices, and regional languages are no longer considered relevant by the younger generation. If not addressed, this situation could lead to cultural discontinuity and threaten the sustainability of local cultural heritage as the social foundation of society. To address this, Tanoker developed a strategy for integrating local curriculum into formal and informal education. This effort was carried out through collaboration with elementary and secondary schools in the Jember region, by inserting local content in the form of regional arts subjects,

cultural projects, and co-curricular activities such as dance classes, traditional music, and discussions of local history. This strategy aims to build cultural literacy in the younger generation from an early age, while also making local culture part of a vibrant and dynamic education system.

3. **Dependence on External Parties** Although Tanoker's empowerment programs grow organically from within the community, their operations still rely heavily on external support, whether in the form of funding, training, or technical facilitation. This dependency creates potential vulnerabilities to the program's sustainability, particularly if these external resources suddenly cease or diminish. This dependency also impacts the community's control over the program's direction, with some initiatives tending to follow the preferences of donors or supporting institutions. This can reduce local autonomy and undermine the principles of community-based empowerment. In response, Tanoker implemented a strategy of strengthening community networks and developing internal capacity. This network is not only external (between institutions), but also horizontally within the community groups themselves. For example, the establishment of cross-village community forums, training local cadres, and replication of empowerment models to surrounding villages are carried out to build a mutually supportive collaborative ecosystem. In addition, funding sources are diversified through community cooperative schemes, cultural crowdfunding, and the development of commercial products, the proceeds of which are reinvested to support community activities. Thus, sustainability is no longer entirely dependent on external assistance, but can be maintained internally through growing local capacity.
4. **Theoretical and Practical Implications** From a theoretical perspective, these findings underscore the importance of a community-based sustainability approach in developing empowerment programs based on local wisdom. Sustainability is not solely determined by the program's technical success, but also by the community's ability to maintain and adapt local values in the face of social, cultural, and economic changes.

In practical terms, Tanoker's approach can serve as a model for similar programs in other regions. The strategy, which combines local culture, digital technology, and empowering local institutions, has proven effective in addressing structural challenges while maintaining the sustainability of social transformation at the grassroots level.

4. Conclusion

Conclusion

This research demonstrates that the Tanoker Learning Village in Jember is a concrete example of successful community empowerment based on local wisdom, strengthening cultural identity and improving the local economy. By integrating traditional values into informal education practices and developing the creative economy, Tanoker has successfully created a learning space that is contextual, inclusive, and relevant to the socio-cultural needs of the local community.

Activities such as the Dolanan Festival, arts and culture training, and the formation of tradition-based business groups have proven that local wisdom serves not only as a passive heritage but can be transformed into productive social and economic capital. The positive impacts are evident in increased cultural awareness, a sense of ownership of local identity, and the growth of creative businesses that contribute to household incomes and community economic dynamics.

However, this success also faces sustainability challenges, such as limited market access, a cultural regeneration crisis among young people, and dependence on external resources. Tanoker has responded to these challenges through various innovative strategies, including digital promotion, integrating local values into the curriculum, and strengthening community networks. These strategies demonstrate that sustainable culture-based empowerment requires a holistic approach encompassing social, economic, educational, and technological dimensions.

Recommendation

Based on research findings and analysis, here are a number of strategic recommendations to strengthen and replicate local wisdom-based empowerment models:

1. **Policy Support from Local Governments:** Local governments need to provide systemic support for community initiatives like Tanoker through affirmative action policies, institutional recognition, and dedicated budget allocations for local wisdom-based programs. This is crucial to ensuring that models like Tanoker not only survive independently but also become part of a

sustainable regional development architecture.

2. Replicating the Model to Other Communities Using a Contextual Approach: The Tanoker empowerment model can serve as a prototype for replication in other areas, with adjustments to local socio-cultural characteristics. The replication process must be based on community participation and not be top-down, to ensure the authenticity of local values.
3. Strengthening Community Digital Literacy and Capacity: To expand market reach and strengthen the competitiveness of local products, digital literacy training and mentoring are needed for community entrepreneurs. This includes the use of social media, e-commerce, culture-based branding, and independent management of digital platforms.
4. Integrating Local Wisdom Values into Formal and Non-Formal Education: The government and educational institutions need to substantively integrate local content into both formal and non-formal curricula. This aims to foster awareness of cultural identity from an early age and prevent cultural dislocation amidst the rapid flow of globalization.
